

PowerAlert

Network Power Management Software

- ▶ Monitor and Control Power for Up to 250 UPS Systems or PDUs
- ▶ Software-Only Solution Requires No Additional Hardware or Licenses
- ▶ Available **FREE** with Included CD or as Web Download

Typical enterprise configuration where there are multiple UPS devices on the network and the IT department needs to view the status of these devices from a central location

PowerAlert Network Power Management Software is a FREE, software-only solution that saves network managers significant installation costs (no additional hardware/license purchases). Use PowerAlert to simplify power management for every network—from a single, local server to a large, global enterprise!

Reduces Deployment Time

- **Mass Configuration of Devices** allows IT managers to save time and money from a single location
- **Device Auto-Discovery** for UPS and PDU devices in specific network segments or IP address surges

Reduces Troubleshooting Time

- **Alarm Log** pools all network alarms into a single, sortable, easy-to-read list
- **“Recommended Action” Messaging** indicates real-time power status along with the alarm’s “Cause” and recommended “Response”

Simplifies Network Power Management

- **SNMP Control** without an internal card or additional IP address
- **Alarm Notification** keeps managers continuously informed of network power conditions through e-mails and SNMP traps
- **Load Shedding/Outlet Control** allows managers to reboot locked devices or preserve runtime by remotely controlling UPS or PDU outlets on non-essential devices
- **Redundant UPS System Management** controls multiple UPS systems connected to a single load
- **Network Shutdown Commands** allow other computers on the network to listen for an outage and automatically shut down
- **Convenient Web Browser Access** to management interface with password-protected browser sessions (HTTP or HTTPS)
